

Getting started with Starbot

Welcome to Starbot! Be an All-Star trader today! ★

https://t.me/StarBot_demo_bot – Demo Mode with 2 ETH Play Money

<https://t.me/starbotprobot> – The real Starbot on Ethereum

<https://t.me/StarbotPro> – Starbot Chat group

<https://starbot.pro/> – Starbot Website

<https://twitter.com/starbotpro> – Starbot Twitter

1. Make sure you have a [Telegram account](#)
2. Open <https://t.me/starbotprobot> and Press start
3. Tap the private key that is generated for you to copy it
4. Keep this private key safe, for example: write it down and store it in your safe
5. Once you have written down your private key, go back to your chat with Starbot and click “Manage Wallets”, then tap on the “Address” to copy it
6. All trades on Starbot use Ethereum (ETH) the base currency, so you will need to transfer some into your Starbot wallet to get started. If you already have ETH in a wallet or account, you can use that
7. If you don’t have ETH yet, log in to your preferred centralized exchange account. There are many centralized exchanges you can use to deposit fiat funds and buy ETH, for example: [Coinbase](#), [Kraken](#), [Binance](#), [Bybit](#), etc.
8. Paste your Starbot wallet address after selecting Transfer, Withdraw or Send from the exchange account or wallet, then double check if this address is correct, and confirm the withdrawal
9. The ETH should arrive in your Starbot wallet within 10 minutes
10. Open up your Telegram chat with Starbot again and press or write /start
11. From the Home screen, you can easily buy the STAR token, which gives you 75% revenue share and access to greater affiliate rewards
12. You can also copy and paste a contract address (CA) for any other token on the Ethereum blockchain, or forward a message to Starbot that contains a contract address
13. Starbot will read the contract address and open it up in the Trade Terminal
14. The Trade Terminal is where you can buy or sell a specific token, which will then show up with all other tokens in your portfolio
15. You can either use the quick action buttons for Trading, or you can press “Custom Trade”
 - a. *If you press Custom Trade, you can use custom orders such as these:*
 - b. *“B1000t” (buy 1000 tokens)*
 - c. *“b\$750” (buy \$750 worth)*
 - d. *“b0.25e” (buy 0.25 ETH worth)*
 - e. *“b25%” (buy 25% of your ETH worth of the token)*
 - f. *You can also sell tokens using Custom Trade, by replacing “buy” in the examples above with “sell” or “s”*
16. You can also practice with [Starbot Demo Mode](#), which gives you 2 ETH of play money for free
17. After placing your order, confirm and the trade will take place between 1 and 12 seconds
18. Once you see the “Success” message, check out your portfolio to see how much of the token you have bought and its value!
19. You will need a cushion of ETH in your Starbot wallet for gas fees and slippage. It is best to keep over \$100 of ETH in the wallet just for that
